

70 PERCENT LLSIL AND POVERTY GUIDELINES FOR 2023

The Lower Living Standard Income Level (LLSIL) and poverty guidelines are used to establish low-income status for Workforce Innovation and Opportunity Act (WIOA) Title I programs. Local Workforce Development Areas (Local Area) use the LLSIL to determine youth eligibility, eligibility of employed adults for certain services, and self-sufficiency.

The tables below show the 70 percent LLSIL for metropolitan, non-metropolitan areas, and three specific Metropolitan Statistical Areas (MSA) in California. In addition, each LLSIL table includes the 100 percent LLSIL that establishes the Department of Labor (DOL) minimum self-sufficiency levels. The last row in each table shows the amount of income you will add for each family member in family sizes greater than six.

Since the income received during the six-month period immediately prior to the individual's application for WIOA funded services is used for income determination, each chart below shows the six-months, as well as the annual, figures for each family size. The six months figures were calculated by taking the 70 percent annual LLSIL figures and dividing that number in half. If dividing the 70 percent annual LLSIL in half resulted in a fractional number, then the six months figure was rounded up to the nearest whole dollar. For example, in the San Diego/Carlsbad MSA table, a family size of five has a 70 percent LLSIL annual figure of \$48,297. When divided in half, the result is \$24,148.50. Rounding up to the next whole dollar produces a six-month figure of \$24,149. A comparison of the applicant's actual family income during the six-month income determination period with the six-month figures on the charts allows the reviewer to immediately determine an individual's eligibility.
